Brief about the Program:

MERF Talk is been Numbers of patent applications have never been higher and there are a number of examples that patents have helped support the development of an ever-increasing range of technology. Yet this success has not given rise to universal satisfaction, either within the immediate circle of administrators and users of the patent system, or among the intended beneficiaries of the system more widely in society. The system today faces two main challenges: an internal challenge, concerning the actual operation of the system; and an external challenge, concerning the policy role, and the economic and social impact of the patent system.
