Brief about the Program:

MERF Talk is one of the forum activity comes under Mechanical Engineers Research Forum (MERF) which helps the students and faculty to get to know about recent technology and share their idea among other students **Hybrid materials** are composites consisting of two constituents at the nanometer or molecular level. Commonly one of these compounds is inorganic and the other one organic in nature. Thus, they differ from traditional composites where the constituents are at the macroscopic (micrometer to millimeter) level. Mixing at the microscopic scale leads to a more homogeneous material that either shows characteristics in between the two original phases or even new properties.

Fig. MERF Seminar Talk – 02 by Mr. Mr.K.Palanisamy., on 22-11-2022 & 12.45 pm to 1.15 pm

Brief about the Program:

MERF Talk is one of the forum activity comes under Mechanical Engineers Research Forum (MERF) which helps the students and faculty to get to know about recent technology and share their idea among other students.. A systematic approach to identifying and eliminating waste (non-value-added activities) through continuous improvement by flowing the product at the pull of the customer in pursuit of perfection.”

The term lean manufacturing is a more generic term and refers to the general principles and further developments of becoming lean. The term lean is very apt because in lean manufacturing the emphasis is on cutting out “FAT” or wastes in manufacturing process. Waste is defined as anything that does not add any value to the product.

Brief about the Program:

MERF Talk is one of the forum activity comes under Mechanical Engineers Research Forum (MERF) which helps the students and faculty to get to know about recent technology and share their idea among other students taking lessons learned from these early offerings and modularizing the curriculum so it will be compatible with other educational settings.. What we are focusing on is developing case studies and laboratory activities that are translatable to a number of different settings and then using standard terminologies.

Brief about the Program:

MERF Talk is one of the forum activity comes under Mechanical Engineers Research Forum (MERF) which helps the students and faculty to get to know about recent technology and Smart manufacturing is a broad category of manufacturing that employs computer-integrated manufacturing, high levels of adaptability and rapid design changes, digital information technology, and more flexible technical workforce training. Other goals sometimes include fast changes in production levels based on demand optimization of the supply chain, efficient production and recyclability. In this concept, as smart factory has interoperable systems, multi-scale dynamic modelling and simulation, intelligent automation, strong cyber security, and networked sensors.

Brief about the Program:

MERF Talk is one of the forum activity comes under Mechanical Engineers Research Forum (MERF) which helps the students and faculty to get to know about recent technology and share their idea among other students.. Every construction project has multiple machine uses and processes. Obviously, there are machines and equipment that are not used but serve vital purposes. Also, they are not be enough appreciation. This in our article, we focused on the importance of crushing and screening machines. Article will be start with what works crushing and screening equipment. Then, we explain why these machine are important, how to find the ideal pieces for your projects. We will finish by giving tips on the topics you can choose and supply.

Why a Spread Sheet?

A spreadsheet is the computer equivalent of a paper ledger sheet. It consists of a grid made from columns and rows.

- * It is an environment that can make number manipulation easy.
- * If you change the mg/day amount, you will have to start the math all over again.
- * On the computer version you can change the values and the result is automatically re-calculated.

Life Stage Group	(mg/day)
0-6 months	210
6-12 months	270
1-3 years	500
4-8 years	800
9-13 years	1300
14-18 years	1300
19-13 years	1000
Average mg/day	788.57

Life Stage Group	(mg/day)

Basics of a Spreadsheet

- Spreadsheets are made up of
 - columns
 - rows
 - and their intersections are called cells
- In each cell there may be the following types of data
 - text (labels)
 - number data (constants)
 - formulas (mathematical equations that do all the work)

Letters denote a columns location.

e.g., column C

Numbers denote a rows location.

e.g., row 4

Cells are denoted by the Column and the

row.

e.g., cell B6

Types of Data you will type

- Three basic types of data that can be entered.
 - labels - (text with no numerical value) e.g., "Life Stage Group", or "0-6 months"
 - constants - (just a number -- constant value) e.g., "210", or "270"
 - formulas* - (a mathematical equation used to calculate) e.g., "=10+100", or "=123*12+78.2"

Life Stage Group	(mg/day)
0-6 months	210
6-12 months	270
1-3 years	500
4-8 years	800
9-13 years	1300
14-18 years	1300
19-13 years	1000
Average mg/day	768.57

Making a Graph

Copy-Paste into Word / Power point

* You can always copy paste from Excel into Word or power point files.

2. AVERAGE

The AVERAGE function should remind you of simple averages of data such as the average number of shareholders in a given shareholding pool.

=AVERAGE(*number1*, [*number2*], ...)

Example:

=AVERAGE(B2:B11) – Shows a simple average,
also similar to (SUM(B2:B11)/10)

Country	Population
China	1,389,618,778
India	1,311,559,204
USA	331,883,985
Indonesia	264,935,824
Pakistan	210,797,896
Brazil	210,301,591
Nigeria	208,679,114
Bangladesh	161,062,505
Russia	141,944,641
Mexico	127,318,112
Average	=AVERAGE(B2:B11)

7 Basic Excel Formulas For Your Workflow

Since you're now able to insert your preferred formulas and function correctly, let's check some fundamental Excel functions to get you started.

1. SUM

The SUM function is the first must-know formula in Excel. It usually aggregates values from a selection of columns or rows from your selected range.

SUM(*number1*, [*number2*], ...)

Example:

- =SUM(B2:C2) – A simple selection that sums the values of a row.
- =SUM(A2:A8) – A simple selection that sums the values of a column.
- =SUM(A2:A7, A9, A12:A15) – A sophisticated collection that sums values from range A2 to A7, skips A8, adds A9, jumps A10 and A11, then finally adds from A12 to A15.
- =SUM(A2:A8)/20 – Shows you can also turn your function into a formula.

Country	Population
China	1,389,618,778
India	1,311,559,204
USA	331,883,985
Indonesia	264,935,824
Pakistan	210,797,896
Brazil	210,301,591
Nigeria	208,679,114
Bangladesh	161,062,505
Russia	141,944,641
Mexico	127,318,112
Total	=SUM(B2:B11)

3. COUNT

The COUNT function counts all cells in a given range that contain only numeric values.

=COUNT(*value1*, [*value2*], ...)

Example:

- =COUNT(A:A) – Counts all values that are numerical in A column.
- However, you must adjust the range inside the formula to count rows.
- =COUNT(A1:C1) – Now it can count rows.

Country	Population
China	1,389,618,778
India	1,311,559,204
USA	331,883,986
Indonesia	264,935,824
Pakistan	210,797,896
Brazil	210,301,591
Nigeria	208,679,114
Bangladesh	161,062,505
Russia	141,944,641
Mexico	127,318,112
COUNT	=COUNT(B2:B11)

K S R INSTITUTE FOR ENGINEERING AND TECHNOLOGY,

TIRUCHENGODE-637 215,
NAMAKKAL DE TAMIL NADU.

4. COUNTA

Like the COUNT function, COUNTA counts all cells in a given range. However, it counts all cells regardless of type. That is, unlike COUNT that only counts numerics, it also counts dates, times, strings, logical values, errors, empty strings, or text.

* =COUNTA(value1, [value2], ...)

Example:

- * COUNTA(C2:C13) – Counts rows 2 to 13 in column C regardless of type. However, like COUNT, you can't use the same formula to count rows. You must make an adjustment to the selection inside the brackets – for example, COUNTA(C2:H2) will count columns C to H

Country	Population
China	1,389,818,778
India	1,311,559,204
USA	331,883,986
Indonesia	264,935,824
Pakistan	210,797,836
Brazil	210,301,991
Nigeria	208,679,114
Bangladesh	161,063,905
Russia	141,944,641
Mexico	127,318,112
COUNTA	=COUNTA(B2:B13)

Country	Population	Average Population	Greater than Average?
China	1,389,818,778	435,810,199	TRUE
India	1,311,559,204	435,810,199	TRUE
USA	331,883,986	435,810,199	FALSE
Indonesia	264,935,824	435,810,199	FALSE
Pakistan	210,797,836	435,810,199	FALSE
Brazil	210,301,991	435,810,199	FALSE
Nigeria	208,679,114	435,810,199	FALSE
Bangladesh	161,063,905	435,810,199	FALSE
Russia	141,944,641	435,810,199	FALSE
Mexico	127,318,112	435,810,199	FALSE

5. IF

The IF function is often used when you want to sort your data according to a given logic. The best part of the IF formula is that you can embed formulas and functions in it.

* =IF(logical_test, [value_if_true], [value_if_false])

Example:

- * =IF(C2<D3, 'TRUE', 'FALSE') – Checks if the value at C3 is less than the value at D3. If the logic is true, let the cell value be TRUE, else, FALSE
- * =IF(SUM(C1:C10) > SUM(D1:D10), SUM(C1:C10), SUM(D1:D10)) – An example of a complex IF logic. First, it sums C1 to C10 and D1 to D10, then it compares the sum.
- * If the sum of C1 to C10 is greater than the sum of D1 to D10, then it makes the value of a cell equal to the sum of C1 to C10. Otherwise, it makes it the SUM of C1 to C10.

6. TRIM

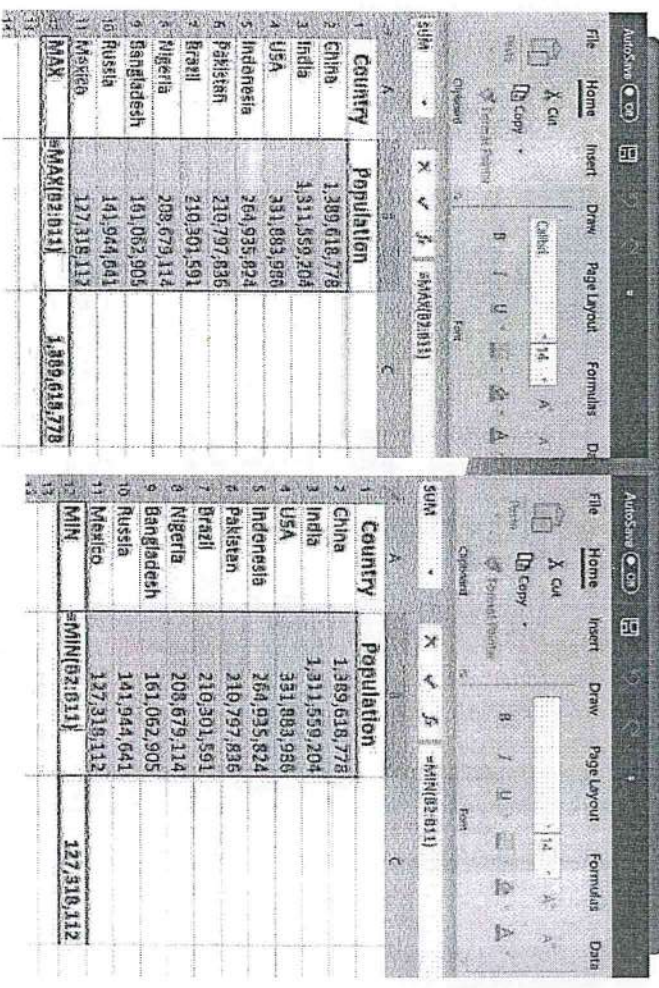

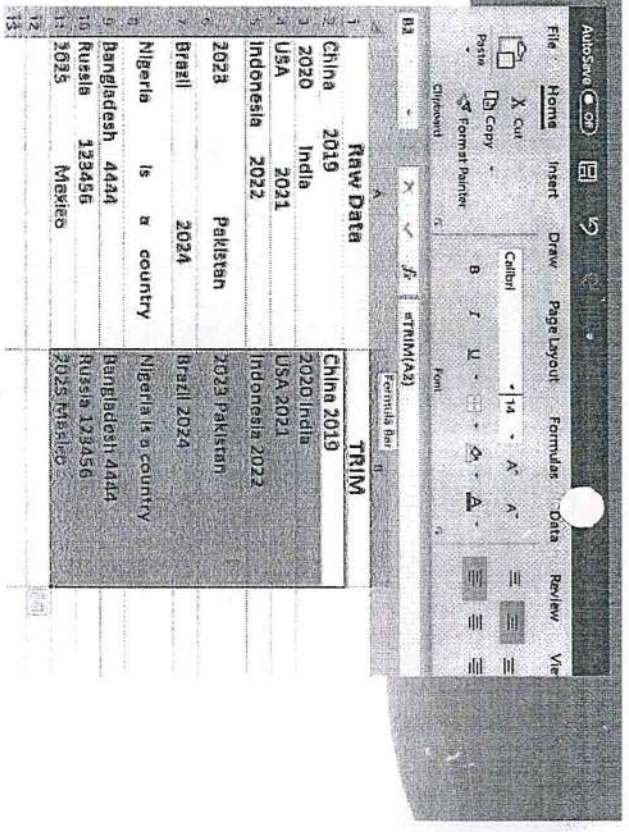

The TRIM function makes sure your functions do not return errors due to unruly spaces.

- * It ensures that all empty spaces are eliminated.
- * Unlike other functions that can operate on a range of cells, TRIM only operates on a single cell.
- * Therefore, it comes with the downside of adding duplicated data in your spreadsheet.
- * =TRIM(text)

Example:

- * TRIM(A2) – Removes empty spaces in the value in cell A2.

7. MAX & MIN
 The MAX and MIN functions help in finding the maximum number and the minimum number in a range of values.

- =MIN(number1, [number2], ...)
 - Example:
 - =MIN(B2:C11) – Finds the minimum number between column B from B2 and column C from C2 to row 11 in both columns B and C.
 - =MAX(number1, [number2], ...)
 - Example:
 - =MAX(B2:C11) – Similarly, it finds the maximum number between column B from B2 and column C from C2 to row 11 in both columns B and C.

10 Advanced Excel Formulas You Must Know

Every financial analyst spends more time in Excel than they may care to admit. Based on years and years of experience, we have compiled the most important and advanced Excel formulas that every world-class financial analyst must know.

1. INDEX MATCH
2. IF combined with AND / OR
3. OFFSET combined with SUM or AVERAGE
4. CHOOSE
5. XNPV and XIRR
6. SUMIF and COUNTIF
7. PMT and IPMT
8. LEN and TRIM
9. CONCATENATE
10. CELL, LEFT, MID and RIGHT functions

1. INDEX MATCH

Formula:

=INDEX(C3:E9;MATCH(B13,C3:C9;0);MATCH(B14,C3:E3;0))

- * This is an advanced alternative to the VLOOKUP or HLOOKUP formulas (which have several drawbacks and limitations).
- * INDEX MATCH is a powerful combination of Excel formulas that will take your financial analysis and financial modeling to the next level.
- * INDEX returns the value of a cell in a table based on the column and row number.
- * MATCH returns the position of a cell in a row or column.
- * Here is an example of the INDEX and MATCH formulas combined together.
- * In this example, we look up and return a person's height based on their name.
- * Since name and height are both variables in the formula, we can change both of them!

2. IF combined with AND/OR

Formula: **=IF(AND(C2>=C4,C2<=C5),C6,C7)**

- Anyone who's spent a great deal of time doing various types of financial models knows that nested IF formulas can be a nightmare.
- * Combining IF with the AND or the OR function can be a great way to keep formulas easier to audit and easier for other users to understand.
 - * In the example below, you will see how we used the individual functions in combination to create a more advanced formula.
 - * For a detailed breakdown of how to perform this function in Excel please see our free guide on how to use IF with AND / OR.

3. OFFSET combined with SUM or AVERAGE

Formula: =SUM(B4:OFFSET(B4,0,E2-1))

The OFFSET function on its own is not particularly advanced, but when we combine it with other functions like SUM or AVERAGE we can create a pretty sophisticated formula.

- Suppose you want to create a dynamic function that can sum a variable number of cells.
- With the regular SUM formula, you are limited to a static calculation, but by adding OFFSET you can have the cell reference move around.
- How it works: To make this formula work, we substitute the ending reference cell of the SUM function with the OFFSET function.
- This makes the formula dynamic and the cell referenced as E2 is where you can tell Excel how many consecutive cells you want to add up.
- Now we've got some advanced Excel formulas!
- Below is a screenshot of this slightly more sophisticated formula in action.

4. CHOOSE

Formula: =CHOOSE(choice, option1, option2, option3)

- The CHOOSE function is great for scenario analysis in financial modeling.
- It allows you to pick between a specific number of options, and return the "choice" that you've selected.
- For example, imagine you have three different assumptions for revenue growth next year: 5%, 12%, and 18%.
- Using the CHOOSE formula you can return 12% if you tell Excel you want choice #2.

	A	B	C	D	E	F	G

7			Selection ->	2	=CHOOSE(7,00,0,00)		
8							
9							
10							
11							

5. XNPV and XIRR

Formula: =XNPV(discount rate, cash flows, dates)

- If you're an analyst working in investment banking equity research, financial planning & analysis (FP&A), or any other area of corporate finance that requires discounting cash flows, then these formulas are a lifesaver!

- Simply put, XNPV and XIRR allow you to apply specific dates to each individual cash flow that's being discounted.
- The problem with Excel's basic NPV and IRR formulas is that they assume the time periods between cash flow are equal.
- Routinely, as an analyst, you'll have situations where cash flows are not timed evenly, and this formula is how you fix that.

8. LEN and TRIM

Formulas: =LEN(text) and =TRIM(text)

The above formulas are a little less common, but certainly very sophisticated ones.

- They are great for financial analysts who need to organize and manipulate large amounts of data.
- Unfortunately, the data we get is not always perfectly organized and sometimes, there can be issues like extra spaces at the beginning or end of cells.
- The LEN formula returns a given text string as the number of characters, which is useful when you want to count how many characters there are in some text.
- In the example below, you can see how the TRIM formula cleans up the Excel data.

9. CONCATENATE

Formula: =A1&" more text"

Concatenate is not really a function on its own - it's just an innovative way of joining information from different cells and making worksheets more dynamic.

- This is a very powerful tool for financial analysts performing financial modeling.
- In the example below, you can see how the text "New York" plus ", " is joined with "NY" to create "New York, NY".
- This allows you to create dynamic headers and labels in worksheets.
- Now, instead of updating cell B8 directly, you can update cells B2 and D2 independently.
- With a large data set, this is a valuable skill to have at your disposal.

10. CELL, LEFT, MID and RIGHT functions

These advanced Excel functions can be combined to create some very advanced and complex formulas to use.

- The CELL function can return a variety of information about the contents of a cell (such as its name, location, row, column, and more).
- The LEFT function can return text from the beginning of a cell (left to right); MID returns text from any start point of the cell (left to right); and RIGHT returns text from the end of the cell (right to left).
- Below is an illustration of the three formulas in action.
- To see how they can be combined in a powerful way with the CELL function, we break it down for you step by

CONSOLIDATED LIST FOR THE ACADEMIC YEAR 2022-2023

S.No.	FACULTY NAME	TITLE	DATE
1.	Ms. Nandhini V D	Research Opportunities in emerging areas of Electronics and Communication Engineering	29-07-2022
2.	Dr. Prabu	Electrocardiogram- Interpretation and Application in Clinical Practice	11-08-2022
3.	Dr. Prabu	Insight of Machine Learning and Artificial Intelligence in Healthcare	13-09-2022
4.	Mr. S Parameswaran	Artificial Engineering & Machine Language	05-10-2022
5.	MrsT Yamuna Rani	IP Awareness/Training Program - National Intellectual Property Awareness Mission	25-11-2022
6.	MrsT Yamuna Rani	Digital Image Processing Techniques	14-12-2022
7.	MsV D Nandhini	Bio-Medical Sensors and Signal Processing	19-01-2023
8.	MrsT Yamuna Rani	Research Opportunities and Futures of Additive Manufacturing Engineering	07-02-2023
9.	MrB B Sangameswaran	Refresher Course on Biomedical Engineering	16-03-2023
10.	MrS Parameswaran	Recent Trends in Biomedical Engineering and Technology	04-04-2023
11.	MrP J Ragu	Radiological Equipment By Hindustan College of Engineering and Technology, Coimbatore	15-05-2023
12.	MrB B Sangameswaran	Bio interface Engineering	11-05-2023
13.	MrB B Sangameswaran	Biomaterials	12-05-2023
14.	Mr B B Sangameswaran	Data Science and Chat GPT	15-05-2023
