Date:17.06.2021

CIRCULAR

It is planned to organize an Orientation Programme on Introduction to Artificial Intelligence organized for Teaching Staffs. The session will be handled by Dr.B.Kalanvathi, PROFESSOR/CSE, KSRIET on 23.06.2021. All the Teaching staffs are asked to attend the session and make use of it. The lists of participants are attached herewith.

NAMAKKAL DI. TAMIL NADU.

Object Detection for Blind people Using Open CV method

PRESENTED BY
Dr. Nandhakumar R M.E., Ph.D.,
Director & professor,
Department of ECE,
KSRIET

INTRODUCTION

- Visual impairment is among the most common disability among mankind.
- According to the World health organization, there is about 285 million of the world's population that suffers from visual illness
- Among them, 39 million are completely blind, and an estimated 246 million suffer from low vision
- In India itself, there are about 53 million visually impaired people, with 6.8 million with complete blindness.

OBJECTIVE

- To design a smart system which guides visually challenged people to avoid obstacles.
- Obstacle detection for visually impaired to detect the obstacles in their way.

PROJECT CATEGORY

PRODUCT

- Social relevance
- The primary motto of making the proposed system as a product is to "Help and support blind peoples".

LITERATURE REVIEW

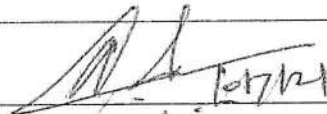

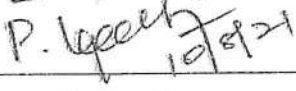

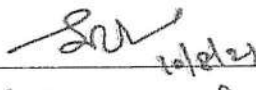

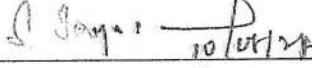

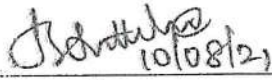

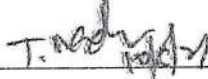

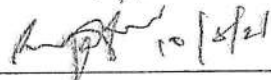

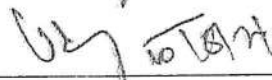

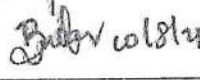

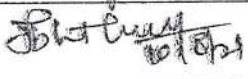

S.N	TITLE OF THE PAPERS	JOURNAL NAME YEAR & ISSN NO	DESCRIPTION	ADVANTAGE	DISADVANTAGE
1	Smart Navigation System For Visually Challenged People	IJEEEE 2016 2347-6982	This paper explains the obstacle avoiding technique using Ultrasonic sensor	The proposed system uses devices that are light weight wearable devices, which makes the system easy to carry. Also, the proposed system is low cost.	The walking speed of the new users of the system is less, Need more practice to use this system
2	A Smart Navguide System for Visually Impaired	IJITEE 2019 2278-3075	This system integrates the Optical Character Recognition and Text to Speech Synthesizer concept to identify the bus name and bus number in the bus stop and it also achieve the obstacle avoidance by using the ultrasonic sensor and it is informed to the user by vibration sensing technique.	Implementation of text to speech/Voice conversion using Raspberry pi for the visually Challenged also helps in the obstacle avoidance by using the ultrasonic sensor	Only the text images is identified and converted into speech not all the physical objects are detected and converted into Speech/Voice
3	A Smart Personal AI Assistant for Visually Impaired People	IRJET 2020 2395-0072	This paper may well be a solution to help the visually impaired using computer science, Voice Recognition and Image Recognition. It provides an efficient way by which visually impaired people are able to interact with the environment using their smart phone Key Words:	Instead of using an Android Application, an IOT device can be implemented for the sole purpose of assisting the visually impaired. This will	Voice Recognition could not be well in all the time Small not clearly detected and conveyed to the blind people.

K S R KALVI NAGAR,
TIRUCHENGODE-637 215,
NAMAKKAL DL, TAMIL NADU.

LORA BASED WIRELESS WEATHER STATION MONITORING

PRESENTED BY
Mr. P.GOVINDARAJU
AP/ECE,
Department of ECE
KSRIET

INTRODUCTION

- A weather station can be described as an instrument or device, which provides us with the information of the weather in our neighboring environment.
- Weather prediction issues started formally since the 19th century, measuring and recording honest data about a specific location under certain atmospheric conditions is a challenge till date.
- Transmitting records emerged with its own challenges and limitations. So began the requirement of a new proposal.

OBJECTIVE

- To design an instrument, which provides us with the information of weather in our neighboring environment by Arduino using the LoRa module
- To store the weather records in Cloud database
- To sense and measure the temperature, pressure, humidity, light intensity, rain value and dust parameters of the surrounding environment
- To extract the weather data efficiently and precise.
- To advance the monitoring system with IOT and cloud and to track the weather report by Thing view free application.

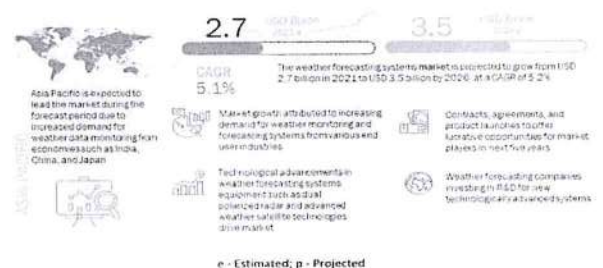

The goal of weather monitoring is to provide information to people and organizations to reduce weather-related losses. Protection of life and property to support economic prosperity and quality of life.

PROJECT CATEGORY

- **Product development**
- Our ultimate aim is to make our Final year project to finish completely as a product and sell it to the market.
- Our team is running with a big motivation from our mentors to complete the product in a successful manner.
- The primary motto of making this completely as a product is "Weather Station In Hands" which is available for everyone at low cost.

Electromagnetics-Real World Signals

Electromagnetics-Real World Signals

Presented by
Dr.S.Premalatha
ASP/ECE/KSRIET

Electromagnetics-Real World Signals

- As use of the electromagnetic frequency spectrum increases, the demand for engineers who have practical working knowledge in the area of electromagnetics continues to grow.
- Electromagnetic engineers design high frequency or optoelectronic circuits, antennas and waveguides; design electrical circuits that will function properly in the presence of external interference while not interfering with other equipment.
- The electromagnetics technical specialty prepares future engineers for employment in industry in the areas of radar, antennas, fiber optics, high frequency circuits, electromagnetic compatibility and microwave communication.

NANOTECHNOLOGY IN MEDICINE AND HEALTH

Dr. S.JAYACHITRA
ASSOCIATE PROFESSOR
DEPARTMENT OF ELECTRONICS AND COMMUNICATION ENGINEERING
K S R INSTITUTE FOR ENGINEERING AND TECHNOLOGY
jchitraee@gmail.com

TOPICS

- NANOTECHNOLOGY TERMS AND DEFINITIONS
- HISTORY OF NANOTECHNOLOGY
- CURRENT AND FUTURE TRENDS, RESEARCH AND APPLICATIONS IN MEDICAL FIELD

SCALE OF THINGS— NANOMETERS

It's hard to imagine a world where nanotechnology is a part of our lives. One nanometer is a millionth of a meter, or about the width of a hair divided by 100,000.

Nanoscience and nanotechnology are the study and application of extremely small things and can be used across all the other science fields, such as chemistry, biology, physics, materials science, and engineering.

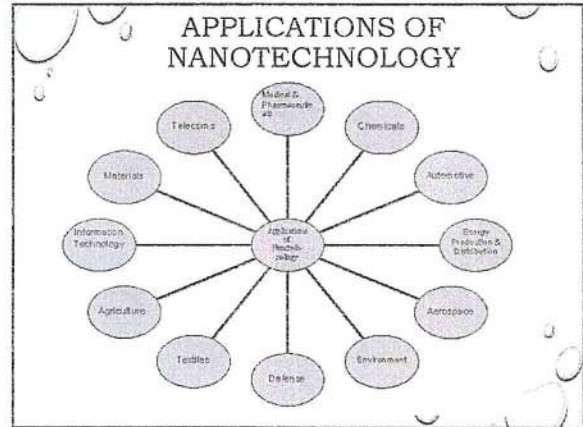

Nanotechnology may be able to create many new materials and devices with a vast range of applications, such as in medicine, electronics, biomaterials and energy production.

The ideas and concepts behind nanoscience and nanotechnology started by physicist Richard Feynman. Feynman described a process in which scientists would be able to manipulate and control individual atoms and molecules.

Physicist Richard Feynman

Nanomedicine is the medical application of nanotechnology.

Nanomedicine ranges from the medical applications of nanomaterials, to nanoelectronic biosensors, and even possible future applications of molecular nanotechnology.

CANCER DETECTION AND DIAGNOSIS

- Cancer is currently the second leading cause of death
- Currently, detection and diagnosis of cancer usually depend on changes in cells and tissues that are detected by a doctor's physical exam or by laboratory-generated images on film.

CANCER

- To detect cancer at its earliest stages, the national cancer institute (NCI) has developed and applied nanotechnology for diagnosis & treatment of cancer.
- Cancer is an abnormal growth of cells anywhere in the body. It occurs when the genes in a cell allow it to split (make new cells) without control

- There are many kinds of cancer, because there are many kinds of cells in the body. Some cancers form growths called tumors, while others, like cancers of the blood (leukemias), travel all over the body.
- Cancers may harm the body in two ways. They may *re-place normal cells* with cells that do not work properly and they may *kill normal cells*

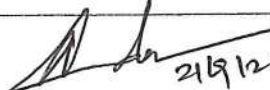

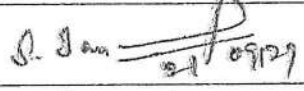

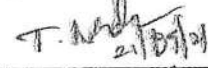

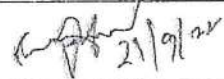

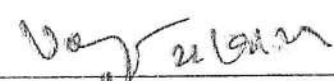

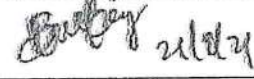

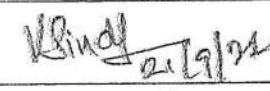

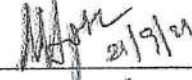

- Nanoscale cantilevers and nanowire sensors that can detect a cancer from a single cell.
- Nanoparticles can aid in imaging malignant lesions, so surgeons know where the cancer is, and how to remove it.
- Nanoshells can kill tumor cells selectively, so patients do not suffer terrible side effects from healthy cells being destroyed.
- Dendrimers can sequester drugs to reduce side effects and deliver multiple drugs to maximize therapeutic impact.

WIFI BASED LOCATION IDENTIFICATION

PRESENTED BY:

Ms Latha. B
Assistant professor , Dept. of ECE,
KSRMET

INTRODUCTION

- In today's world location tracking and identification plays a major role in various domain.
- GPS (Global positioning system) is completely depend upon the satellite for locating things.
- Instead of re-lying on satellite, this project make use of WI-FI routers and access points(smart devices) to identify any devices more accurately than GPS does.
- In this project, pulse sensor is used to detect the heart rate and signal is monitored in cloud.

OBJECTIVE

- The main objective is to keep track of an object constantly.
- To give immediate indication to the user when signal is not received based on the heart rate measured by the pulse sensor.
- To make use of only WI-FI signals for locating one or more devices completely independent on Global Positioning System and other satellite navigation system.

PROJECT CATEGORY

INDUSTRY PROBLEM:

- Our ultimate aim is to identify an industry problem in various industry sectors and gives valuable solution to it.
- Our team is running with a big motivation from our mentors to analyze the problem in industry and solve those problem in successful manner.
- The primary motto is "constant tracking of smart devices in cloud and making alert when the signal is interrupted in respective smart devices".

AI BASED DRY PLANT DETECTION & MOISTURE CONTROL USING RASPBERRY PI

Presented by:

Mr. M V MAHESH,
Department of ECE,
KSRIET

ABSTRACT

- Adopting an optimized irrigation system has become a necessity due to the lack of the world water resource.
- This project focuses on a smart irrigation system which is cost effective. Automation allows us to control various appliances automatically.
- The objective of this project is to control the water supply to each plant automatically depending on leaf's dryness.

INTRODUCTION

- "Forestation is important to everyone as eyes for humans".
- At the present era, the farmers have been using irrigation technique in India through the manual control in which the farmers irrigate the land from time to time.
- This process sometimes consumes more water.
- Automatic irrigation scheduling is valuable in effective use of water than the manual irrigation based on direct soil manual moisture calculations.
- Irrigation of plants is usually a very time-consuming activity and it requires a large number of human resources.
- All the steps were executed by humans traditionally.

OBJECTIVES

- To design a smart irrigation system to water plants with the use of current technological devices.
- To provide an efficient and fairly cheap automated irrigation system.
- To eliminate the plants watering workload.
- To save time of manual plants watering.

PRODUCT CATEGORY

- | | |
|---|--|
| <ul style="list-style-type: none">▪ Almost everyone in their life may have planted or watered the plants.▪ But people waters the plants manually, they fetch water and then pour to the individual plants.▪ This method is time consumption.▪ Our product will automates this manual irrigation process. | <ul style="list-style-type: none">▪ Social Relevance▪ Research/ Patent▪ Startup✓ Product development▪ Industry Problem |
|---|--|

MARKET PAIN

- In the existing method of watering plants, the gardener/cultivator has to manually fetch water and then pour it to respective individual plants.
- In this process, there is a wastage of water that is used to irrigate the plants.
- One has to fetch water manually to pour water to plants.

Cold supply chain risk monitoring and safety alerting system using IoT

Presented By:
M.Udhayakumar, M.E.,
AP/Department of ECE,
KSRIET

INTRODUCTION

- Cold chain management has been growing in the past few decades.
- An IOT resolution offers a powerful data-link platform with smart tracking device.
- Internet of Things (IoT)-based risk monitoring system for controlling product quality.

OBJECTIVE

- To track the live location for real time monitoring and safety measures.
- The system can monitor the real time temperature and humidity level.
- In order to ensure the safe supply of the cold storage products.

PROJECT CATEGORY

- This project is based on IoT belongs to embedded system.
- Research and Development
- Exposure to industrial purpose

LITERATURE REVIEW

S.No.	Title of the Paper	Description	Advantages	Disadvantages
1	Maximizing recyclability and reuse of tertiary packaging in production and distribution network	Tertiary packaging is necessary for transportation in any production and distribution network because of the benefits in enhancing the logistic efficiency. However, in the meantime, it produces a lot of packaging waste every day.	Tertiary packaging after transportation may still be in good condition and can be collected back for reuse.	Very large data mining concept. No suitable technique for industrial purpose.
2	IoT-based Business for performance measurement a real-time supply chain decision alignment	Real-time information not only allows manufacturing companies to view up-to-the-minute trends from customers around the world, but it also helps them plan or combat any potential disruptions or bottlenecks across the supply chain.	•Green Planning, Condition Monitoring Reporting and Data Analysis Potential	•Lack of Coordination between Various Departments •High Redundancy When interacting multiple departments.
3	A supply chain performance measurement approach using the pattern of change toward main potential SCPMS	Supply Chain management can be defined as the management of flow of products and services, which begins from the origin of products and ends with the product's consumption at the end user.	This is a brief introductory material that explains the methodologies applied in the rapidly growing area.	This approach could help in establishing new performance measurement applications.

LITERATURE REVIEW

S.No.	Title of the Paper	Description	Advantages	Disadvantages
4	Thing Speak based sensing and monitoring system	Accretions for remote monitoring of the monitoring parameters and other stuffs with the use of sensors that requires for wireless sensing of real-time data.	•Thing speak also provide a feature to prepare sensing and monitoring system as reusable. •Generally a sensing unit is composed of different sensors through public.	•Thing speak is not very secure as it based on cloud-parameter only. •Thing speak not apply any encryption on IoT device data so we can get the data in sensor and back able by third party.
5	Fruit Wastages from Farm Gate to Retail Outlets in Tamil Nadu, India- With Specific Focus on Fruit Processing Unit	Fruit Waste means solid waste deriving from fruits and vegetables that is biodegradable and includes the peel, stalk, pulp, seeds and leaves.	•Cost savings when purchasing only as much food as needed, and avoiding additional costs of disposal. Reduced methane emissions from landfills and a lower carbon footprint.	•Given the plight of world hunger, this fact is shameful enough, but what many of us may not realize is that wasted food also has a harmful effect on the environment.
6	Progress and Challenges with Achieving Universal Immunization Coverage: Estimates of Immunization Coverage	Vaccine coverage is usually expressed as the proportion or prevalence (%) of complete immunization by particular assessment ages. Coverage data are usually provided for each major vaccine type and for all vaccines due at a number of age milestones.	•Immunization is a simple and effective way of protecting yourself and your family. •Immunization works by equipping the immune system to fight against certain diseases.	•A low-grade fever, headache and soreness at the injection site. •Some vaccines cause a temporary headache, fatigue or loss of appetite.

Real Time Vehicle Security System through Face Recognition

Presented by:

Mr.R.Vinodkumar,M.E.,(Ph.D.)
Assistant Professor
Department of ECE,
KSRIET

INTRODUCTION

- Our project reduces the theft in the Transport Industry.
- On passed years notifies that Cargo Theft increased rapidly high.
- Food and Beverages constituted for 19% of the goods stolen in 2018 and increased to 28% in 2019.
- Over the year, theft has increased on macro level.
- The number of automobiles involved in travelling each year grows drastically high and it becomes impossible to identify the stolen vehicle.

OBJECTIVE

- To reduce the theft in the Transport Industry by Real Time Vehicle Security System through Face Recognition.

PROJECT CATEGORY

Product development:- Future Scope

- Smart hybrid device which vehicle carries a heavy load.
- Secure way of monitoring action of vehicle with real-time.

MARKET GAIN

- This system which will be implementing with highly secured for cargo theft.
- Specific scheme is involved, which is more security in one of the natural thing is face identities.

MARKET PAIN

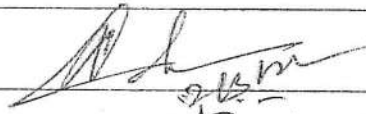

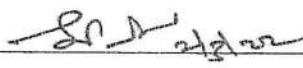

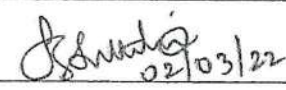

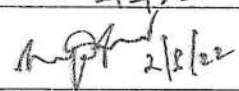

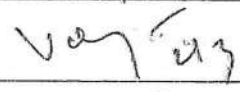

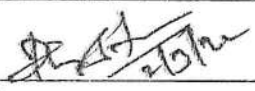

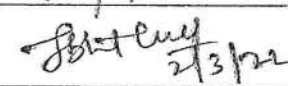

- In the transport industry the vehicle parts and load that carried by vehicle are getting theft has been enhanced widely.
- On facts, statistics-Delhi economic survey report there were 11.8 million motorized vehicle has been lost.
- Everyday , there exist an reports on value of 8400+ vehicle and goods , industry raw were theft.
- In Asian country got high rate of theft that exist anonymously are in China and India.

SMART CONNECTED VEHICLES USING IOT

Presented by
V.Sindhuja,
AP/ECE

Introduction:

- To bridge the real time communication gap between the cars and services centers
- Systems will use live data to direct drivers away from congested areas, minimizing journey times.
- By 2025, there will be more than 400 million vehicles
- Connected and semi-autonomous vehicles are already on our streets. 23.2 million vehicles with secure connected technology are forecast to ship in 2020.

Objective:

- To provide better driving experience and to avoid unwanted traffic delays by communicating information between vehicles and service centers and users

Existing system:

Drawbacks of Existing System:

- Connected vehicles is not a common executed technology
- It is still in the stage of conceptualization and development stage
- Some brands producing cars with initial stages of this technology such as the MG Hector. Due to lack of M2M network infrastructure.
- There is no direct to car to car communication, instead they using the cloud infrastructure.

Proposed Methodology:

MICROSTRIP PATCH ANTENNA FOR MEDICAL APPLICATIONS

P.MOHANA SUNTHARI
Assistant Professor/ECE
KSRIET

Abstract:

- A wearable textile antenna for wireless and medical applications has been proposed. During this work first we will design a textile antenna, namely, a rectangular microstrip patch antenna and then an annular slot antenna will be designed for wireless and medical applications.
- After designing two kinds of antennas, a comparison will be made between their results. In case, antenna gives moderate bandwidth and gain, 1*2 or 1*3 antenna array will also be designed to improve antenna characteristics.
- Conductive textile, a copper-plated polyester fabric, will be used for fabricating antenna radiators and grounds. An insulating rubber fabric with optimum thickness of 0.78 mm and a permittivity of 3 will be used for preparing the substrates.
- The proposed antenna will be designed and all the results will be calculated using user friendly CST Microwave studio Software.

Designed Antenna Structure

Dimension of Antenna

Parameter Name	Dimensions in mm
1. Length of Patch (L^P)	43 mm
2. Width of Patch (W^P)	49 mm
3. Length of Ground (L^G)	50 mm
4. Width of Ground (W^G)	54 mm
5. Width of Feed (W^f)	1.69 mm
6. Dielectric Constant (ϵ_r)	3
7. Height of Substrate(h)	0.78 mm

Challenges in (IoT) INTERNET of THINGS

Presented by
ARUN PRASATH M M
Assistant Professor
Department of Electronics and Communication Engineering
K S R INSTITUTE FOR ENGINEERING AND TECHNOLOGY

Table Of Content

- History of IOT
- IoT Definition
- How IoT works?
- What is an example of an Internet of Things device?
- IoT benefits to organizations
- Why Is Internet of Things (IoT) so important?
- IoT Applications
- Challenges of Internet of Things (IoT)
- Advantages
- Disadvantages
- References

History of IOT

- 1999- The term "Internet of Things" was used by Kevin Ashton during his work at P&G which became widely accepted
- 2004 - The term was mentioned in famous publications like the Guardian, Boston Globe, and Scientific American
- 2005-UN's International Telecommunications Union (ITU) published its first report on this topic.
- 2008- The Internet of Things was born
- 2011- Gartner, the market research company, include "The Internet of Things" technology in their research

IOT Definition

- "The Internet of Things (IoT) is a system of interrelated computing devices, mechanical and digital machines, objects, animals or people that are provided with unique identifiers and the ability to transfer data over a network without requiring human-to-human or human-to-computer interaction."

How IoT works?

- 1) Sensors/Devices
- 2) Connectivity
- 3) Data Processing
- 4) User Interface

1) Sensors/Devices

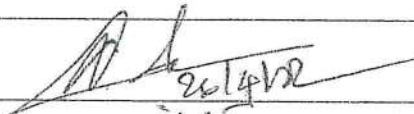

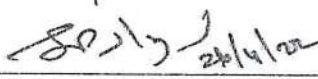

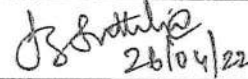

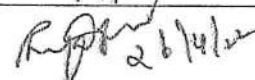

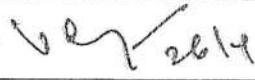

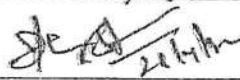

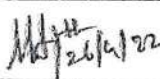

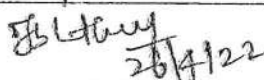

- Sensors or devices are a key component that helps you to collect live data from the surrounding environment.
- All this data may have various levels of complexities.
- It could be a simple temperature monitoring sensor, or it may be in the form of the video feed.

MEANDER INFUSED MIMO FOR 5G APPLICATION

Submitted by
MS.M.JEYABHARATHI
AP/ECE
KSRIET

OUTLINE

- ABSTRACT
- INTRODUCTION
- DESIGN FLOW
- OBJECTIVE
- SOFTWARE USED
- PROPOSED SYSTEM
- SIMULATION RESULT
- CONCLUSION
- REFERENCE

ABSTRACT

A Compact size Meander Infused MIMO antenna, which is operating from 20GHz to 28GHz is presented in this paper. The proposed antenna is designed using FR-4 Substrate, with concentric circular slots and corner truncations in the patch. Half ground is implemented, additionally Meander lines are included in the ground plane which caused resonances at 20.9GHz, 25.5GHz, 26.9GHz and at 28GHz with good return loss and gain. The SISO is converted into MIMO with substrate size of 30x30x1.6mm. MIMO parameters such as ECC, DG, Isolation have been analyzed and obtained to be good. The proposed prototype is a good candidate for future 5G Wireless communication such as virtual reality for future multimedia world as millimeter wave fits perfectly for virtual reality devices.

INTRODUCTION

- 5G network is the next generation of mobile communication which has advantage of having high bandwidth.
- The incorporation of multiple antennas over a single antenna system with high isolation in the transmitter and/or receiver of the user equipment is more demanding. Multiple-input-multiple-output (MIMO) antenna system has distinct features like high data rate, increased channel capacity, high isolation between antenna elements, low latency, and high quality of service within restricted amount of power in the highly scattered environment of modern wireless communication systems involving 5G (Fifth Generation) technology after 4G.
- The frequency spectrum of 5G is been classified as,
 - i) Sub-6 GHz
 - ii) Millimeter Wave
- 5G wireless communication systems will support spectrum band of sub-6 GHz (spectrum below 6 GHz) and millimeter-wave (spectrum above 24 GHz)

WHY 28GHz?

- The international telecommunications union discharges the potential millimeter-wave frequency band between 24 to 84 GHz frequency at a global radio communication conference held in 2015 which is 27.5-29.5 GHz, 33.4-36 GHz, 37-40.5GHz, 42-45 GHz, 47-50.2GHz, 50.4-52.6 GHz and 59.3-71. The USA-based Federal Communication Commission has proposed 28, 38, 39 and 64-71 GHz frequency for the 5G wireless communication system, where 28 GHz and 38 GHz are robust frequency bands because at this frequency the attenuation of the air is low and higher data rates and lower latency can be achieved.
- Antenna research community has shown greater interest to develop antenna designs for 5G communication specifically at 28 GHz and 38 GHz frequency bands.
- These bands are large enough for carrying out high speed communication intended for future 5G communication network.

Fig. MERF Seminar Talk – 01 by J.MATHAN, M.E., on 05-08-2021 & 03.00 pm to 3.30 pm

Brief about the Program:

MERF Talk is one of the forum activity comes under Mechanical Engineers Research Forum (MERF) which helps the students and faculty to get to know about recent technology and share their idea among other students.. —Failure analysis of two hydraulic rotary drills used for rock drilling was carried out. Chemical analysis, metallurgical examination, surface fractography and hardness measurement were used for the analysis. The failed drill rods composition matched with low alloy 31NiCrMo13-4 grade steel. The hardness measurement results suggested that the drilled rods were surface hardened. Surface fractography examination revealed that crack initiation of the fractured drill rods started at the outer surface, especially at the joint between the drill rod and drill bit.

Fig. MERF Seminar Talk – 02 by . P.MANIKANDAN.,M.E.,on 27-08-2021 & 12.45 pm to 1.15 pm

Brief about the Program:

MERF Talk is one of the forum activity comes under Mechanical Engineers Research Forum (MERF) which helps the students and faculty to get to know about recent technology and share their idea among other students.. A gear is a rotating machine part having cut teeth, or cogs, which mesh with another toothed part in order to transmit torque. Two or more gears working in tandem are called a transmission and can produce a mechanical advantage through a gear ratio and thus may be considered as a simple machine. Geared devices can change the speed, magnitude, and direction of a power source. The most common situation is for a gear to mesh with another gear, however a gear can also mesh a nonrotating toothed being operated under different loads part, called a rack, there by producing translation instead of rotation.

Brief about the Program:

MERF Talk is one of the forum activity comes under Mechanical Engineers Research Forum (MERF) which helps the students and faculty to get to know about recent technology and share their idea among other students.. Smart materials technology enables us to adapt to environmental changes by activating its functions. Multifunctional materials, sort of smart materials, can be activated by electrical stimuli so as to produce its geometry change or property change.

Fig. MERF Seminar Talk – 04 By Mr. K. GOPALAKRISHNAN, M.E. On 23-09-21 & 1.00 pm To 1.40 pm

Brief about the Program:

MERF Talk is one of the forum activity comes under Mechanical Engineers Research Forum (MERF) which helps the students and faculty to get to know about recent technology and share their idea among other students.. Orbital welding is a technique whereby the welding tool is rotated through 360° (or 180° in double up welding) around a static workpiece. Originally developed to solve the problem of operator error in Tungsten Inert Gas (TIG) welding (also known as Gas Tungsten Arc Welding (GTAW)), and allow for a uniform weld around pipes and tubes, which can be difficult to achieve with manual welding processes.

Fig. MERF Seminar Talk – 02 by Dr.K.Venkatesh Raja,M.E.,Ph.D.,on 13.12.2021& 10.30 am

Brief about the Program:

MERF Talk is one of the forum activity comes under Mechanical Engineers Research Forum (MERF) which helps the students and faculty to get to know about recent technology and share their idea among other students. Artificial intelligence (AI) and robotics are digital technologies that will have significant impact on the development of humanity in the near future. They have raised fundamental questions about what we should do with these systems, what the systems themselves should do, what risks they involve, and how we can control these. MERF Talk will make students think innovative and improve their skill.

Brief about the Program:

MERF Talk is one of the forum activity comes under Mechanical Engineers Research Forum (MERF) which helps the students and faculty to get to know about recent technology and share their idea among other students.. The composite materials are replacing the traditional materials, because of their superior properties such as high impact strength, to weight ratio. The developments of new materials are on the anvil and are growing day by day. Natural fiber composites such as sisal fiber became more attractive due to their high specific strength, lightweight and biodegradability. Mixing of natural fiber with Glass-Fiber is finding increase in applications.

Brief about the Program:

MERF Talk is one of the forum activity comes under Mechanical Engineers Research Forum (MERF) which helps the students and faculty to get to know about recent technology and share their idea among other students.. Cryogenic machining deals with the direct application of cryogen in the cutting zone to reject heat to reduce tool wear rate and improve surface integrity. Cryo-processing of the tool is a method to improve tool resistance to wear by treating them cryogenically before the machining process.

How to publish a research paper in Quality journals

Abstract

Publishing your research is an important step in your academic career. While there isn't a one-size-fits-all approach, this guide is designed to take you through the typical steps in publishing a research paper. Discover how to get your paper published, from choosing the right journal and understanding what a peer reviewed article is, to responding to reviewers and navigating the production process. Choosing which journal to publish your research paper in is one of the most significant decisions you have to make as a researcher. Where you decide to submit your work can make a big difference to the reach and impact your research has. It's important to take your time to consider your options carefully and analyze each aspect of journal submission – from short listing titles to your preferred method of publication, (for example open access. Don't forget to think about publishing options beyond the traditional journals format – for example, open research platform F1000Research, which offers rapid, open publication for a wide range of outputs.

Computational Intelligence

Abstract

Computational Intelligence (CI) is the theory, design, application and development of biologically and linguistically motivated computational paradigms. Traditionally the three main pillars of CI have been Neural Networks, Fuzzy Systems and Evolutionary Computation. However, in time many nature inspired computing paradigms have evolved. Thus CI is an evolving field and at present in addition to the three main constituents, it encompasses computing paradigms like ambient intelligence, artificial life, cultural learning, artificial endocrine networks, social reasoning, and artificial hormone networks. CI plays a major role in developing successful intelligent systems, including games and cognitive developmental systems. Over the last few years there has been an explosion of research on Deep Learning, in particular deep convolution neural networks. Nowadays, deep learning has become the core method for artificial intelligence. In fact, some of the most successful AI systems are based on CI. Using the human brain as a source of inspiration, artificial neural networks (NNs) are massively parallel distributed networks that have the ability to learn and generalize from examples. This area of research includes feed forward NNs, recurrent NNs, self-organizing NNs, deep learning, convolution neural networks and so on. Using the human language as a source of inspiration, fuzzy systems (FS) model linguistic imprecision and solve uncertain problems based on a generalization of traditional logic, which enables us to perform approximate reasoning. This area of research includes fuzzy sets and systems, fuzzy clustering and classification, fuzzy controllers, linguistic summarization, fuzzy neural networks, type 2 fuzzy sets and systems, and so on.

Microsoft Azure AI Fundamentals

Abstract

Artificial Intelligence (AI) impacts almost everything we do today with devices and computers. The purpose of the AI-900 exam is to test your understanding of the fundamental concepts of AI and the AI services Microsoft provides in Azure. The exam includes high-level concepts for AI and machine learning (ML), as well as the capabilities of particular Azure AI services. Having a high-level appreciation of AI is important to everyone involved in building and using solutions that make use of AI. There are no prerequisite skills or experience required. Microsoft certifications distinguish you by proving your command of a broad set of skills and experience with current Microsoft products and technologies. The exams and corresponding certifications are developed to validate your mastery of critical competencies as you design and develop, or implement and support, solutions with Microsoft products and technologies both on-premises and in the cloud. Certification brings a variety of benefits to the individual and to employers and organizations. Machine learning (ML) is the current focus of AI in computer science. Machine learning focuses on identifying and making sense of the patterns and structures in data and using those patterns in software for reasoning and decision making. ML uses past experiences to make future predictions. ML allows computers to consistently perform repetitive and well-defined tasks that are difficult to accomplish for humans. Over the past few years, machine learning algorithms have proved that computers can learn tasks that are tremendously complicated for machines and have demonstrated that ML can be employed in a wide range of scenarios and industries. machine learning algorithms such as clustering, classification, and regression and how machine learning works in terms of organizing datasets and applying algorithms to train a machine learning model.

Privacy - Preserving AI techniques for Machine Learning

Abstract

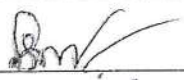

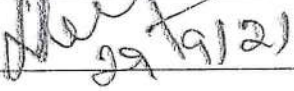

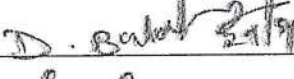

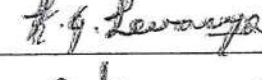

Machine learning algorithms based on deep Neural Networks (NN) have achieved remarkable results and are being extensively used in different domains. On the other hand, with increasing growth of cloud services, several Machine Learning as a Service (MLaaS) are offered where training and deploying machine learning models are performed on cloud providers' infrastructure. However, machine learning algorithms require access to the raw data which is often privacy sensitive and can create potential security and privacy risks. To address this issue, we present CryptoDL, a framework that develops new techniques to provide solutions for applying deep neural network algorithms to encrypted data. In this paper, we provide the theoretical foundation for implementing deep neural network algorithms in encrypted domain and develop techniques to adopt neural networks within practical limitations of current homomorphic encryption schemes. We show that it is feasible and practical to train neural networks using encrypted data and to make encrypted predictions, and also return the predictions in an encrypted form. We demonstrate applicability of the proposed CryptoDL using a large number of datasets and evaluate its performance. The empirical results show that it provides accurate privacy-preserving training and classification. Machine learning algorithms based on deep Neural Networks (NN) have attracted attention as a breakthrough in the advance of artificial intelligence (AI) and are the mainstream in current AI research. These techniques are achieving remarkable results and are extensively used for analyzing big data in a variety of domains such as spam detection, traffic analysis, intrusion detection, medical or genomics predictions, face recognition, and financial predictions [9, 10, 24, 27, 32, 38, 44, 54]. However, training the models requires access to the raw data which is often privacy sensitive and can create potential privacy risks.

How to get Patents for Research Work

Abstract

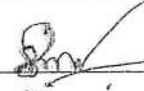

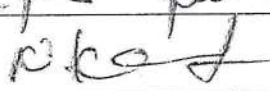

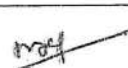

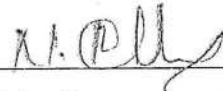

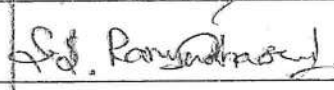

With the ongoing CRISPR patent battle, there is no better time to refresh some important information on patenting inventions. Legally, technology transfer is defined as formal licensing of technical inventions to third parties under the guidance of professional organization. Accordingly, for new technological inventions, a government body usually grants legal rights (monopoly) in the form of a patent. A patent awards rights to the inventor/entity, preventing others from claiming ownership, yet allowing the use of the technology. The process for applying and acquiring a patent is however complex and diverse. Primarily, the United States Patent and Trademark Office has a clear patent application process for outstanding research inventions. On the same note, the European Community Research and Development framework has similar guidelines. By definition, a patent is protection granted to an invention by a national government. This protection provides leverage to the patent holder. It excludes others from creating, using, or selling an invention for a period stated in the patent document. A patent lasts for over 20 years. Three types of patent grants include; utility, design, and plant, with most new inventions registered as utility patents. The development must be novel to the world, have a useful purpose with "real-world" value and be non-obviously original. With computer-related inventions, for example, patent examiners first determine the software's patent suitability based on the functionality. Based on the contribution, the role of the inventor is legally determined. In addition, when assigning inventor ship, the contribution made by co-authors to publish work related to the invention is subjective. Additionally, publicly available information known as 'prior art' needs to be considered.

Artificial Intelligence in healthcare

Abstract

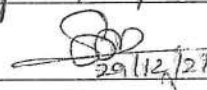

AI in healthcare is an umbrella term to describe the application of machine learning (ML) algorithms and other cognitive technologies in medical settings. In the simplest sense, AI is when computers and other machines mimic human cognition, and are capable of learning, thinking, and making decisions or taking actions. AI in healthcare, then, is the use of machines to analyze and act on medical data, usually with the goal of predicting a particular outcome. A significant AI use case in healthcare is the use of ML and other cognitive disciplines for medical diagnosis purposes. Using patient data and other information, AI can help doctors and medical providers deliver more accurate diagnoses and treatment plans. Also, AI can help make healthcare more predictive and proactive by analyzing big data to develop improved preventive care recommendations for patients. Healthcare is one of the most critical sectors in the broader landscape of big data because of its fundamental role in a productive, thriving society. The application of AI to healthcare data can literally be a matter of life and death. AI can assist doctors, nurses, and other healthcare workers in their daily work. AI in healthcare can enhance preventive care and quality of life, produce more accurate diagnoses and treatment plans, and lead to better patient outcomes overall. AI can also predict and track the spread of infectious diseases by analyzing data from a government, healthcare, and other sources. As a result, AI can play a crucial role in global public health as a tool for combating epidemics and pandemics.

BLOCK CHAIN TECHNOLOGY

Abstract

A block chain is a public ledger to which everyone has access but without a central authority having control. It is an enabling technology for individuals and companies to collaborate with trust and transparency. One of the best know applications of block chains are the cryptographic currencies such as Bit coin and others, but many other applications are possible. Block chain technology is considered to be the driving force of the next fundamental revolution in information technology. Many implementations of block chain technology are widely available today, each having its particular strength for a specific application domain. The tutorial provides the participants with insights and practical experience on Block chain technology and applications in practice, as well as theory based exploration of possible business cases. A block chain is a type of distributed ledger technology (DLT) that consists of growing list of records, called blocks, that are securely linked together using cryptography. Each block contains a cryptographic hash of the previous block, a timestamp, and transaction data (generally represented as a Merkle tree, where data nodes are represented by leaves). The timestamp proves that the transaction data existed when the block was created. Since each block contains information about the previous block, they effectively form a chain (compare linked list data structure), with each additional block linking to the ones before it. Consequently, block chain transactions are irreversible in that, once they are recorded, the data in any given block cannot be altered retroactively without altering all subsequent blocks

How to get Patents for Research Work

Abstract

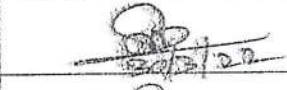

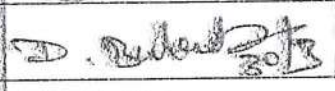

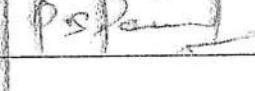

Securing patent protection is one of the most important ways of safeguarding your intellectual assets. In order to succeed and stay on top of the game, companies must distinguish themselves from their competitors based on their intellectual property portfolios. Patent protection stops your contenders from making, using, distributing, or importing your innovation in the country or countries in which patent rights are granted. Let us develop into the world of patents and learn how to effectively safeguard your intellectual property with these simple tips. There are three key conditions – novelty, innovation, and industrial applicability which must be fulfilled for an idea to be patented. The invention must demonstrate a new characteristic that is unknown in the current body of literature. It should be such that an individual with ordinary skills in the relevant field should not be able to deduce it very easily or obviously. However, while filing the patent one must describe it in sufficient details such that any person with ordinary skill sets in the similar field can replicate it. The patent must also demonstrate industrial applicability. Before filing a patent, one should ensure that the innovation has not been anticipated by publication in any form prior to the date of filing the patent. For confirming this one must conduct an exhaustive patent search. There are various methods of identifying already existing patents.

DATA ANALYTICS USING R PROGRAMMING

Abstract

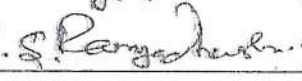

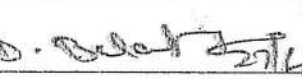

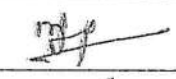

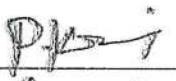

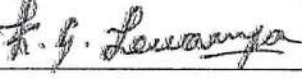

A huge repository of terabytes of data is generated each day from modern information systems and digital technologies such as Internet of Things and cloud computing. Analysis of these massive data requires a lot of efforts at multiple levels to extract knowledge for decision making. Therefore, big data analysis is a current area of research and development. The basic objective of this paper is to explore the potential impact of big data challenges, open research issues, and various tools associated with it. As a result, this article provides a platform to explore big data at numerous stages. Additionally, it opens a new horizon for researchers to develop the solution, based on the challenges and open research issues. Keywords—Big data analytics; Hadoop; Massive data, Structured data, Unstructured Data. In digital world, data are generated from various sources and the fast transition from digital technologies has led to growth of big data. It provides evolutionary breakthroughs in many fields with collection of large datasets. In general, it refers to the collection of large and complex datasets which are difficult to process using traditional database management tools or data processing applications. These are available in structured, semi-structured, and unstructured format in pet bytes and beyond. Generally, Data warehouses have been used to manage the large dataset. In this case extracting the precise knowledge from the available big data is a foremost issue.

Mock Interview for Industry Readiness

Abstract

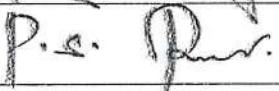

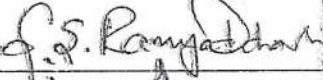

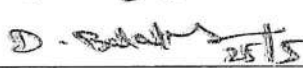

A mock interview mirrors an actual job interview. It gives you an opportunity to practice what to say and do during an interview and get feedback. Whether it's face-to-face, online, or through a webcam, a mock interview is useful in reviewing your answers to common interview questions and assessing other factors such as your outfit, mannerisms, and body language. A typical mock interview is a practice job interview held with a professional career counselor. A mock interview helps you learn how to answer difficult questions, develop interview strategies, improve your communication skills, and reduce your stress before an actual job interview. A mock interview is an emulation of a job interview used for training purposes. The conversational exercise usually resembles a real interview as closely as possible, for the purpose of providing experience for a candidate. Mock Interview is an imitation interviewing session of an actual interview, which can be conducted by anyone who has little knowledge about the respective industry of candidate's interest. The interview tries to emulate an actual interview as closely as possible and aims to provide the candidate with relevant experience.

INTERNAL QUALITY ASSURANCE CELL (IQAC)

The Internal Quality Assurance Cell (IQAC) is organizing a One day Workshop on "Outcome Based Education & Assessment of CO PO Attainment" on 24.09.2021(Friday). In this regard, all faculty members are asked to attend the program without fail.

Topic : Outcome Based Education & Assessment of CO PO Attainment

Resource Person1 : Dr.R.Jeyabharath

Controller of Examinations, KSRIET

Resource Person2 : Dr.P.Veena

IQAC Coordinator, Professor & Head/EEE, KSRIET

Venue : EEE Seminar Hall

Date & Time : 24.09.2021 (Friday) & 10:00AM-04:00PM

	INTERNAL QUALITY ASSESSMENT CELL		
Name of the program	WORKSHOP	Forum Name	IQAC
Title of the Topic	Outcome Based Education & Assessment of CO-PO Attainment	Date	24/09/2021
		Time	10.00 AM - 04.00PM
		Number of Participants Attended	70
		Venue	EEE Seminar Hall
Name of the source Person	Dr.R.Jeyabharath, Controller of Examinations, KSRIET	Dr.P.Veena, Prof & Head/EEE, IQAC Coordinator, KSRIET	
<p style="text-align: center;">Report of the Event</p> <p>The Session started with Welcome address by Mr.P.Chakkrawarthy, Asst. Prof of Mechanical Department. The Objective of this workshop is to understand the concept of Outcome based Education and to assess the CO, PO attainment of a program. The Forenoon Session was conducted by Dr.R.Jeyabharath, Controller of Examination, KSRIET and Afternoon Session was handled by Dr.P.Veena, Prof & Head/EEE and IQAC Coordinator. The concept of Outcome Based Education, the need for Accreditation and assessment methods were explained in detail. The Administrative system for Implementation of OBE and structure of COs were also discussed.</p> <p>The framing of Course outcomes in association with Programme Outcomes, Bloom's Taxonomy and level prescription was stated. A detailed description about mapping of COs with POs and its attainment level were put forth with examples. The resource persons clarified the doubts asked by Faculty members. They also demonstrated the method of calculating CO-PO attainment through Hands on Training. The Session was ended with Vote of thanks delivered by Mr.M.Udhayakumar, Asst. Prof. of ECE Department.</p>

INDUCTION PROGRAMME SCHEDULE

DATE : 28.09.2021 & 29.09.2021

VENUE: EEE - SEMINAR HALL

DAY - 1 (28.09.2021)		
TIME	TOPIC	RESOURCE PERSON
09:15 a.m. - 10:00 a.m.	Inaugural address - Opportunities and Challenges in Engineering Education	Dr. M. Venkatesan Principal
10:00 a.m. - 11:00 a.m.	Attitude and Character Building	Dr. R. Nandakumar Director - Administration
11:00 a.m. - 11:15 a.m.	Tea Break	
11:15 a.m. - 12:45 p.m.	Soft Skills Development	Dr. R. Nandakumar Director - Administration
12:45 p.m. - 01:45 p.m.	Lunch	
01:45 p.m. - 02:45 p.m.	Professional Communication - Part 1	Dr. C. Muhuntarajan HoD - English
02:45 p.m. - 03:00 p.m.	Tea Break	
03:00 p.m. - 04:00 p.m.	Professional Communication - Part 2	Dr. C. Muhuntarajan HoD - English
DAY - 2 (29.09.2021)		
09:15 a.m. - 10:00 a.m.	Teaching & Learning and Assessment Techniques	Dr. R. Jeyabharath CoE
10:00 a.m. - 10:45 a.m.	Research and Development Activities	Dr. B. Kalaavathi Director - R&D
10:45 a.m. - 11:00 a.m.	Tea Break	
11:00 a.m. - 11:45 a.m.	III Cell and Skill Development Activities	Dr. P. Murugesan Director - III & SD
11:45 a.m. - 12:30 p.m.	Administrative Skills and T&P Activities	Dr. R. Nandakumar Director - Administration
12:30 p.m. - 01:30 p.m.	Lunch	
01:30 p.m. - 02:00 p.m.	Initiatives on Student Affairs	Dr. J.C. Kannan Director - SA&SH
02:00 p.m. - 02:45 p.m.	Motivational Address by Heads	Dr. R. Prabu HoD - BME Dr. M. Vimaladevi HoD - CSE Mr. P. Govindaraju HoD - ECE Dr. P. Veena HoD - EEE
02:45 p.m. - 03:00 p.m.	Tea Break

- Used electrically energized fire
- Used Non inflammable metals

3. which colored band denotes the carbon dioxide content in the fire extinguishers. *

2 points

- Red
- Blue
- White
- Black

4. which class of fire involves an electrical equipment *

2 points

- Class A
- Class D
- Class B
- Class C

5. since in how many years the refilling should done in water type fire extinguishers *

2 points

- 2 years
- 5 years
- 3 years
- 4 years

6. what is the colour for portable water type fire extinguishers *

2 points

- Emerald green
- Pale cream
- French blue
- Signal red

Principal

ENGINEERING AND TECHNOLOGY,
K S R KALVI NAGAR,
TIRUCHENGODE-637 215,
NAMAKKAL Dt. TAMIL NADU.

7. Which of the following is NOT the cause of electric fire *

2 points

- Open doors
- Electric short circuit
- Loose connection
- Over loading in wires

8. The possibility of fire while fueling an automobile is due to *

2 points

- Static Pressure
- Exposed fuel
- Temperature of vehicle
- Atmospheric Pressure

9. What is the full form of HVSSS *

2 points

- High velocity water spray system
- High vital water spray system
- High velocity water suction system
- High versatile water suction system

10. How far away should you stand when you are using a fire extinguisher to put out a fire *

2 points

- 4 feet
- 6 feet
- 8 feet
- 10 feet

11. The acronym for putting out a fire using a fire extinguisher is PASS. What does PASS stand for *

2 points

- Pull, Aim, Squeeze, Spread
- Pull, Accuracy, Squeeze, Spread
- Pin, Aim, Squeeze, Sweep
- Pull, Aim, Squeeze, Sweep

12. The three elements of the fire triangle are *

2 points

- Water, a heat source, and fuel
- Oxygen, water, and fuel
- Oxygen, fuel, and a heat source
- Fuel, oxygen, and earth

13. Do you know where the nearest fire extinguisher is in your work area? *

2 points

- Yes
- No

14. You should always keep an exit or means of escape at your back when trying to fight a fire. *

2 points

- True
- False

15. Which type of extinguisher has a hard horn on the end of a flexible hose or metal arm? *

2 points

- AFFF (air-foamized water)
- CO2 (carbon dioxide)
- ABC (dry chemical)

Mark only one oval.

- input
- output
- memory
- storage

1 point

9. The Central Processing Unit consists of - *

Mark only one oval.

- control unit
- ALL
- CPU
- All of the above

1 point

7. A hard disk is divided into tracks which are further subdivided into

Mark only one oval.

- vectors
- clusters
- sectors
- None of the above

1 point

10. Which memory is known as volatile memory *

Mark only one oval.

- RAM
- ROM
- Floppy
- All of the above

1 point

8. Teletypewriter terminal is a example of *

Mark only one oval.

- input device
- output device
- Both A & B
- None of the above

1 point

11. Which of the following is a device that is used to connect a number of LANs? *

Mark only one oval.

- Bridge
- Switch
- Router
- Repeater

1 point

12. 12. Which of the following would be a logical first step in troubleshooting a PC? *

Mark only one oval.

- Check the computer CMOS
- Define the circumstances of the problem
- Call the vendor
- Define what applications are being used

13. 13. Which would you do first when troubleshooting a faulty monitor? *

Mark only one oval.

- Check its connections to the computer and power source
- Use a meter to check the CRT and internal circuitry for continuity
- Power down the monitor, then turn it on again to see if that corrects the problem
- Power down the computer, then turn it on again to see if that corrects the problem

14. 14. What is the first step in diagnosing a completely dead computer at the client site that was working the day before. *

Mark only one oval.

- Test the power supply
- replace the CMOS battery
- check the AC outlet
- reseal the hard drive controller cable

15. 15. You see the message "invalid media device" after installing a new hard drive. What do you do next? *

Mark only one oval.

- Format
- Eject
- partition
- Add the OS

Brief About the Workshop:

“Microsoft Office (Word & Excel)” - Skill development programme for technical and Non-technical staff was conducted on 24.12.2021. The session starts with Prayer song and Dr. P. Veena coordinator - IQAC welcomes the respected chief guest, Principal, Directors, HoD's and the staff members with immense pleasure.

The workshop mainly highlights to train the staff members to get easier in using formulas that are used in MS-Excel applications. The Sessions were conducted by Mr. R. Prabhau, from HI-Tech Systems, Tiruchengode and Mr. T. Selvaprabhu, AP/IT of K S R Institute for Engineering and Technology. The workshop concluded by vote of thanks given by Mrs. S. Akiladevi, ASP/Chemistry.

1. What is the intersection of a column and a row on a worksheet called ? * 1 point
- Value
 - Column
 - Address
 - Cell

2. What type of chart is useful for comparing values over categories ? * 1 point
- Pie Chart
 - Column Chart
 - Line Chart
 - Dot Graph

3. Which function in Excel tells how many numeric entries are there ? Your third question? * 1 point
- NUM
 - COUNT
 - SUM
 - CHKNUM

4. A features that displays only the data in column (s) according to specified criteria * 1 point
- Formula
 - Sorting
 - Filtering
 - Pivot

5. Statistical calculations and preparation of tables and graphs can be done using * 1 point
- Adobe Photoshop
 - Excel
 - Access
 - Power Point

PART B
Following (6 to 15) Each Questions Carries 2 Mark.

PART B
Following (6 to 15) Each Questions Carries 2 Mark.

6. What type of chart will you use to compare performance of two employees in the year 2016 ? *

2 points

- Column Chart
- Dot Chart
- Line Chart
- Pie Chart

7. Which one is not a Function in MS Excel ? *

2 points

- SUM
- AVG
- MAX
- MIN

8. Functions in MS Excel must begin with ____ *

2 points

- An () sign
- An Equal Sign
- A Plus Sign
- A > Sign

9. Which function in Excel checks whether a condition is true or not ? *

2 points

- SUM
- COUNT
- IF
- AVERAGE

10. In Excel, Columns are labelled as ____ *

2 points

- A, B, C, etc
- 1, 2, 3 etc
- A1, A2, etc.
- \$A\$1, \$A\$2, etc.

11. The Greater Than sign (>) is an example of ____ operator.

2 points

- Arithmetic
- Logical
- Conditional
- Greater

12. In Excel, which one denoted a range from B1 through E5

- B1 - E5
- B1 to E5
- B1:E5
- B1&E5

2 points

13. The ___ feature of MS Excel quickly completes a series of data

- Auto Complete
- Auto Fill
- Fill Handle
- Sorting

2 points

14. How will you graphically represent expenditure in different departments ?

- Column Chart
- Line Chart
- Pie Chart
- Gantt Chart

2 points

15. How many sheets are there, by default, when we create a new Excel file ?

- 1
- 2
- 3
- 4

2 points

PART C (Insert An Excel File with Pie Chart for Students (Roll No, Name, Subjects, Total, Pass/Fail, Percentage) having 5 different subjects and calculate the Total of each student and give average of them along with their over all Pass & Fail Percentage, use Count If formula to show how many students passed and failed) - 10 Marks

10 points
